Soha Ertebat at a glance

Soha Ertebat Company started its work in 2010 under the name of Emdadrayaneh Company. Gaining experience and trying to increase its technical knowledge and ability, the company expanded its activities During these years by believing in providing services for the development of the province's telecommunication platforms. In this regard, and to achieve the new goals of the company, Soha Ertebat has been born and started its activities with the hope of a bright future.

Soha Ertebat Company, with its experience and specialized and committed human resources, has been able to obtain all licenses related to its field of work in a short period of time. Soha Ertebat 's main customers are individuals (real persons), government agencies and private factories.

Message from management

It is an honor that you, dear customers and audience, have considered this company worthy of your service. Soha Ertebat Engineering Company has started its activities with the aim of helping to develop the country's IT infrastructure and has started to provide services from the beginning by using experienced personnel and modern methodologies.

In Soha Ertebat Technical and Engineering Group, accurate planning for short-term and long-term goals as well as intra-organizational diagnostics play an important role in the company's development and certainly customer satisfaction. The announcement of this matter makes us happy that the selection of the best products, the use of experienced technical and commercial experts, training and support on the products provided, and as a result, customer satisfaction are in the company's strategy.

We hope that you will continue your loyalty in this path as in the past.

Sincerely Yours Mohsen Tagebaf Chief Executive Officer

Available services

Unified Threat Management

Having a complete set of security tools, you can manage the network threats of the organization and have higher productivity.

Data Center

We provide you with a safe place to store organizational information to which you always have access.

Voice Over Internet Protocol (VOIP) Phones

If your company has several branches and offices around the world and you pay a lot of money for telephone costs, we suggest using VOIP telephones.

Network infrastructure

Building a sustainable network is one of the main pillars of any leading and successful organization. Providing the highest quality network platform for your company is one of our specialties.

Wireless communication

To have a secure, stable and low-cost communication between different units of the organization that are more than one hundred meters away from the main center, we suggest using secure wireless communication.

Fiber optic communication

Optical fiber is the highest media in terms of transmission speed and the best in terms of being influenced by environmental conditions Therefore, the use of this platform is recommended for high-speed communication in areas with frequency pollution and electromagnetic waves.

Official representative of Kasperskye antivirus

Kasperskye antivirus is one of the most famous and reliable security software that due to its capabilities and facilities has obtained the necessary license for being used in sensitive government centers. It can protect your information against attacks and threats inside and outside the organization.

Data Lass Prevention (DLP)

It is a set of processes that prevent sensitive electronic information from disappearing in the organization. With the full implementation of the DLP process, all stages of information production in the organization are examined. In this system, control is defined for people who have access to information during the process, as well as to the technological tools that are involved with information throughout the process. These controls complement each other in the form of chain links and will prevent data from losing.

Risk management

This is an integrated solution to manage and address concerns about information stored on portable devices. In this system, by providing solutions and using tools, it is possible for employees to use their portable devices in the organization without compromising the security of organizational information.

Representative and distributor of Wi-Tek products in the Middle East

The wireless-tek Technology company, known as Wi-Tek, started its production in the field of network communication equipment in 2009. The company is now able to market its products to CE, FCC and ROHS standards.

Radio Network Infrastructure

In creating the infrastructure to use wireless network technology, the use of various types of towers as a cost-effective and fast solution allows you to establish a stable network connection between two or more point without the use of physical platforms such as wires and cables. Designing and implementing such infrastructures is one of the specialties of this company.

VHF / UHF Wireless Networks

We offer these systems to our customers as a solution for two-way wireless voice communication, which are operational in many applications such as public security, emergency services, transportation, etc.

Fire Alarm and Extinguishing Systems

Since the first minutes of the fire are very important and vital, on the other hand, the causes of fire are very diverse and it can also occur at any time of the day, we offer our specialized services in the installation and operation of fire alarm and extinguishing systems.

Startup

In today's world where we are witnessing rapid changes in technology and the needs of target markets, the role of entrepreneurship and consequently startups cannot be ignored. Soha Ertebat Company has also tried to make a significant contribution in this field by achieving a correct understanding of the needs of today's society, independently or by supporting the owners of ideas. Currently, two startup projects are ready for operation:

- 1- Comprehensive intelligent urban transportation system
- 2- Not in-person meeting system
- 3- Online food ordering system and this year we have several different projects under review and feasibility study.
